

# DR. HAWELIA'S SKIN CLINIC

EXCELLENCE IN SKIN, HAIR & LASER

# ABOUT OUR CLINIC

Dr. Hawelia's Skin Clinic, situated in the heart of Kolkata, is a premier destination for advanced skin, hair, and laser treatments, overseen by the esteemed dermatologist Dr. Dinesh Hawelia. Our clinic specializes in treating **skin, hair, and nail conditions with a scientific and rational approach**. Our cosmetology and laser departments are renowned for offering a wide range of services, including **anti-aging solutions, pigment removal, laser hair reduction, laser resurfacing, botox, fillers, and more**. We pride ourselves on our evidence-based treatment strategies and use only scientifically verified products and procedures.

Our team is comprised of **well-trained, courteous, and efficient professionals** dedicated to providing exceptional care. We offer a comprehensive solution for all skin and hair-related concerns, addressing aging issues, providing instant makeovers, and offering a variety of laser procedures. Our commitment is to deliver customized care and ensure optimal results through our **world-class medico-aesthetic services**.

## DR. DINESH HAWELIA

---

Dr. Dinesh Hawelia, MBBS, MD, is a distinguished dermatologist with over 30 years of experience. He graduated and topped the MD Examination at the University of Calcutta. Dr. Hawelia has held various positions at the Indian Association of Dermatologists, Venereologists, and Leprologists (IADVL), including Honorary Secretary and Vice-President of the West Bengal State Branch. He actively participates in local, zonal, national, and international conferences, often as a speaker or moderator. Dr. Hawelia was recognized as the most inspiring dermatologist in India by the Economic Times in 2020. His expertise includes Clinical Dermatology, Aesthetic Dermatology, Laser surgery, and more. Dr. Hawelia's vision is to provide world-class, affordable dermatological care, while his mission is to offer holistic solutions for all skin, hair, nail, and aesthetic concerns with compassion and comprehensive guidance.

- ▶ Iontophoresis
- ▶ PUVA Therapy
- ▶ Platelet - Rich Plasma (PRP)
- ▶ Allergic Patch Test
- ▶ Punch Grafting
- ▶ NB-UVB Therapy
- ▶ HydraFacial
- ▶ HIFU

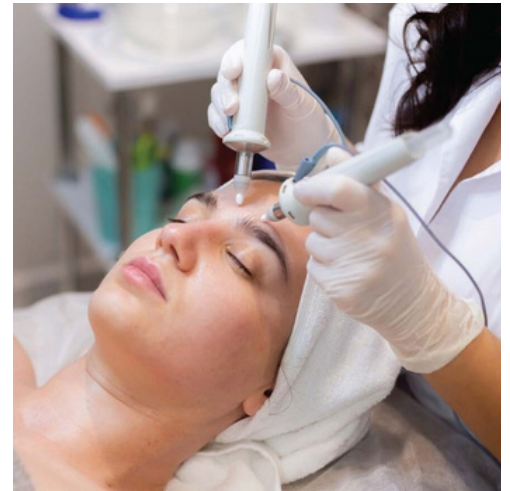

## CHEMICAL PEELING

Chemical peels improve skin texture and reduce blemishes through controlled peeling and skin regeneration. Treats acne, sun damage, dullness, hyperpigmentation, and fine lines.

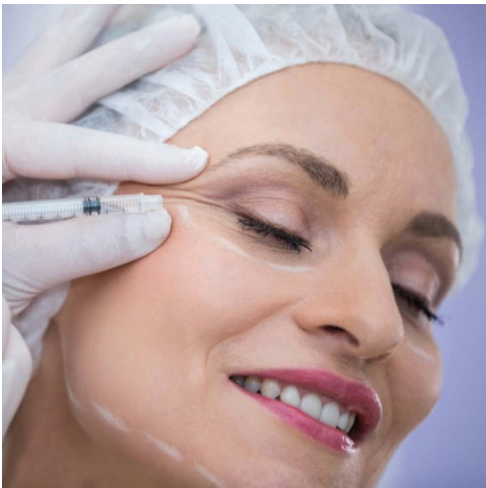

## MICRO DERMABRASION

Microdermabrasion is a non-surgical procedure that renews skin tone and texture, improving sun damage, wrinkles, acne scars, and other skin concerns.

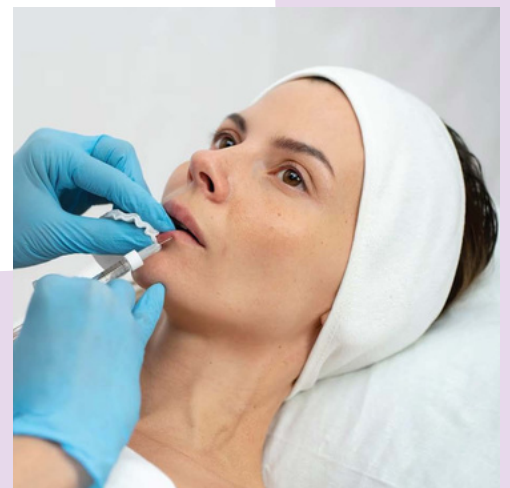

## BOTULINUM TOXIN (BOTOX)

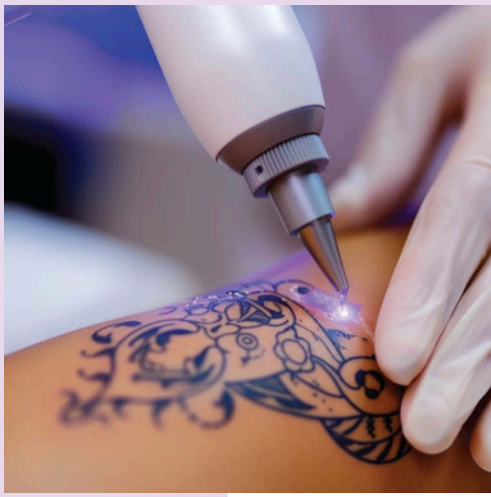

BOTOX injections relax facial muscles, reducing wrinkles and preventing age lines. Results last 4-6 months, with repeated treatments leading to long-lasting effects. Common areas treated include forehead lines, crow's feet, and frown lines.

## FILLERS

Fillers, made of hyaluronic acid, restore lost volume to areas like the cheeks, lips, and jawline, reducing wrinkles and rejuvenating the face by replenishing collagen and elastin.

## LASER TATTOO REMOVAL

Tattoo removal uses lasers to break down ink particles, which are then flushed away by the body's immune system. The process lightens the tattoo over multiple treatments.

## LASER HAIR REDUCTION

Laser hair removal destroys hair follicles with heat, inhibiting future growth. Effective for all skin types, it may require maintenance treatments. Common areas treated include face, hands, chest, and legs.

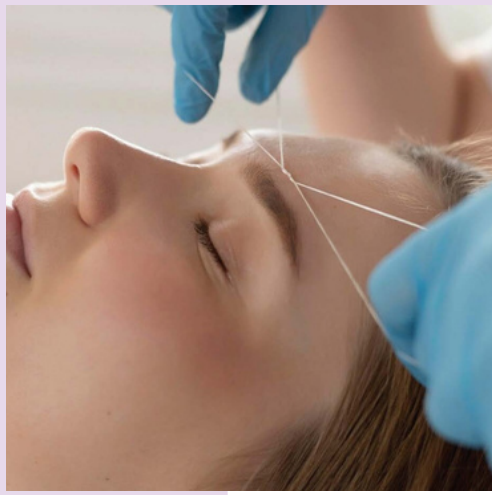

## LASER TONING

Laser toning uses low-energy lasers to reduce melanin and stimulate collagen, improving skin texture and tone with minimal downtime. Effective for pigmentation issues, age spots, and uneven skin tone.

## LASER RESURFACING

Laser resurfacing removes old skin cells, promoting collagen growth for improved texture, tone, and reduced wrinkles. It's safe, effective, and non-invasive, targeting sun damage, fine lines, and more.

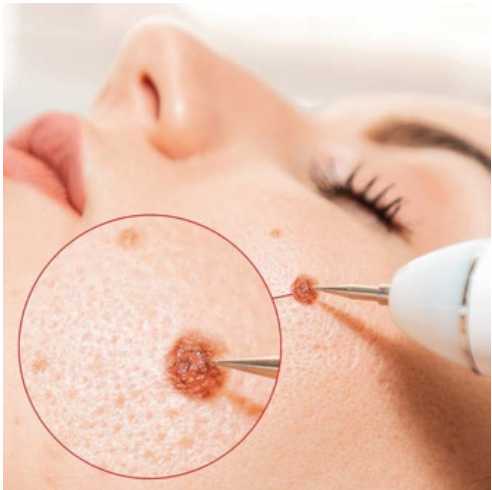

## THREAD-LIFT

Thread lift tightens and sculpts the face using medical-grade threads, offering a minimally invasive alternative to facelift surgery with quick recovery. Ideal for those in their late 30s to early 50s.

## NANO FRACTIONAL RF

Venus Viva's Nano Fractional RF technology offers safe, non-invasive facial rejuvenation with immediate and long-term results. Requires 3-4 treatments per area, with minimal downtime and discomfort, in under 30 mins.

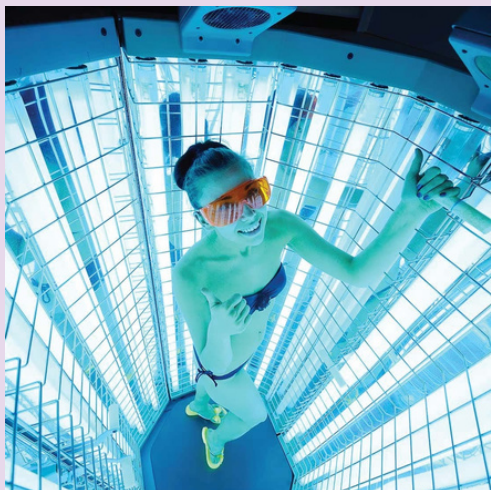

## ELECTRO SURGERY

Electrosurgery uses electricity to cut, coagulate, or destroy tissue in dermatological procedures. Our FDA-approved hyfrecator provides precise treatment for warts, skin tags, moles, and more.

## IONTOPHORESIS

Topical iontophoresis uses solutions like normal saline or anticholinergic medication to reduce sweating and improve drug delivery through the skin. It's safe, effective, and cost-efficient.

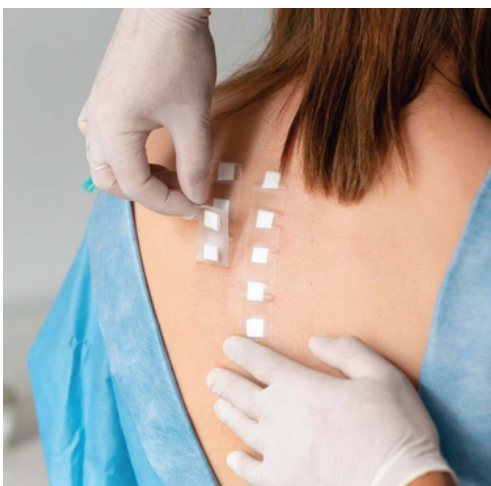

## PUVA THERAPY

PUVA therapy combines Psoralen ingestion with UVA light exposure to treat skin conditions like vitiligo and psoriasis. Treatment duration and UVA dosage are gradually increased based on individual tolerance.

## PLATELET RICH PLASMA

PRP therapy uses platelet-rich plasma from your blood to promote hair growth and skin rejuvenation. It requires multiple treatments for best results, with maintenance sessions recommended yearly.

## ALLERGIC PATCH TEST

Our clinic offers allergy patch testing to identify skin rash causes. A patch is applied on the upper back for 24 hours, with readings taken after removal and at 72 hours. Positive reactions indicate allergens to avoid.

## PUNCH GRAFTING

Autologous punch grafting, or minigrafting, is a cost-effective vitiligo treatment. It involves transferring small pieces of skin from a donor area to recipient skin pits.

## HYDRAFACIAL

A HydraFacial is a non-invasive skincare treatment that cleanses, exfoliates, extracts impurities, and infuses the skin with hydrating serums in a single session.

## HIFU

HIFU (High-Intensity Focused Ultrasound) is a non-invasive treatment used to lift and tighten the skin by delivering focused ultrasound energy to deeper tissue layers, including the superficial muscular aponeurotic system (SMAS), the same structural layer addressed during surgical facelifts.

## EXCIMER LAMP

An excimer lamp is a targeted ultraviolet light device used in dermatology, mainly for treating localized skin diseases. It usually emits UVB light, which helps reduce inflammation and alter abnormal immune activity in the skin.

## EXOSOME THERAPY

Exosome therapy in dermatology is an emerging regenerative treatment that uses tiny extracellular vesicles called exosomes to promote skin repair, reduce inflammation, and stimulate hair growth.

## NB- UVB THERAPY

NB-UVB therapy uses a UVB narrowband lamp for conditions like psoriasis and vitiligo. Safe for pregnant women and children, treatment duration and intensity vary based on the condition and individual response.

## TECHNOLOGY BEHIND DR. HAWELIA'S CLINIC

# CLIENT STORIES

## TRANSFORMATIVE EXPERIENCES WITH OUR SERVICES

### **DIVYA SINGH**

Advocate

Excellent service, the doctor is very friendly, listens to your problem and explain, well behaved and supporting staff. I visited for skin rejuvenation very happy with the treatment.
